

Versa Steel Wire Shelving

Care, Use & Warranty Guide

Versa Steel wire shelving is available in **Chrome, Epoxy and Premier Epoxy** finishes to suit a variety of commercial foodservice, storage and display applications. Selecting the appropriate finish – and using it correctly – will help maximize the life and appearance of your shelving.

CHROME WIRE SHELVING

Recommended for: Dry storage and display applications

- Chrome wire shelving is designed for use in **dry environments**. It is not recommended for wet, damp, high-humidity or other applications where the shelving is regularly exposed to moisture.
- Chrome shelving is **not guaranteed against rust or corrosion**. Exposure to water, condensation, cleaning chemicals, high humidity or other corrosive conditions may result in surface deterioration or rust over time.

Warranty: Standard manufacturer defect warranty applies. Rust and corrosion are not covered.

EPOXY WIRE SHELVING

Recommended for: General storage, including applications where increased corrosion resistance is required

- Versa Steel Epoxy shelving features an **anti-rust treatment beneath the epoxy finish** to provide additional protection against corrosion.
- Under normal use, the shelving is **guaranteed against rust for five (5) years**.
- The epoxy coating is an important part of the shelf's corrosion protection. If the coating becomes chipped, scratched or otherwise damaged, the exposed area may eventually develop rust.
- For maximum service life, we recommend storing **plastic containers, cardboard cartons and other non-abrasive items** directly on the shelving. Where metal pans, containers, equipment or other metal objects will be stored, the use of **protective shelf mats or liners is strongly recommended**.

Warranty: 5-year warranty against rust under normal use. Damage to the epoxy finish caused by impact, abrasion, metal-on-metal contact, misuse or other physical damage – and any resulting corrosion – is not covered.

PREMIER EPOXY WIRE SHELVING

Recommended for: Demanding commercial applications requiring our highest level of corrosion protection

- Versa Steel Premier Epoxy shelving features a **zinc undercoat beneath the epoxy finish**, providing an additional layer of protection against corrosion.
- Premier Epoxy shelving includes a **lifetime warranty against rust under normal use**.
- The epoxy coating should still be protected from chips, scratches and abrasion. If the epoxy coating is damaged, the underlying zinc layer may become exposed. Exposed zinc may **oxidize or discolour over time** and, depending on the extent of the damage and environmental conditions, corrosion may eventually occur.
- For best results, use plastic containers, cardboard cartons and other non-abrasive products directly on the shelving. When storing metal pans, containers or other metal items, **protective shelf mats or liners are recommended** to minimize metal-on-metal contact and damage to the epoxy finish.

Warranty: Lifetime warranty against rust under normal use. Physical damage to the epoxy or zinc protective coatings caused by impact, abrasion, metal-on-metal contact, misuse or other external damage – and corrosion resulting from such damage – is not considered a manufacturing defect and is not covered.

Protect Your Shelving

Regardless of finish, proper care will help extend the service life of your Versa Steel shelving.

- Select the appropriate shelving finish for the intended environment.
- Avoid dragging or dropping sharp, heavy or metal objects directly on epoxy-coated shelves.
- Use shelf mats or liners where frequent metal-on-metal contact is expected.
- Clean using non-abrasive materials and appropriate cleaning products.
- Inspect epoxy-coated shelving periodically for chips, scratches or other physical damage.
- Do not assume that an epoxy coating makes shelving impervious to physical damage or corrosion.
- Do not exceed the stated weight capacity of the shelving. When casters are installed, the total load must not exceed the rated weight capacity of the casters.

WARRANTY CONDITIONS

Rust and corrosion warranties apply to the shelving finish under normal intended commercial use and are subject to EFI Sales Ltd. warranty terms and conditions.

Warranty coverage does not extend to corrosion or finish failure resulting from misuse, abuse, improper cleaning, harsh or corrosive chemicals, physical damage, abrasion, impact, modification, improper application, or damage to protective coatings caused by stored items.

When metal products are stored directly on epoxy-coated shelving, EFI recommends the use of appropriate shelf mats or liners. Damage caused by metal objects chipping, scratching or wearing through the protective coating is not covered under the rust warranty.
